

Get more communication and collaboration from your conference rooms, huddle rooms & SOHO meetings by adding face to face remote and mobile users - with Microsoft Teams, Skype & Skype for Business or Google+, WebEx, etc.

	<p><i>Upgrade your conference & huddle rooms by adding team video conferencing, communications & collaboration capabilities with remote devices - iPhones, iPads, Androids, PCs, Laptops & Macs.</i></p> <p>The Situation: <i>In a typical conference or huddle room, with a standards based videoconferencing system from Cisco, Polycom, Sony, & LifeSize, there are one or more large screen monitors (LCDs/Plasmas/Projectors), and a high quality PTZ camera, one or more mics, and speakers. However, you are limited to linking with other standards based systems.</i></p> <p><i>. . . and now there are lots of remote new mobile & smart phone video users. . . and there are literally millions of Microsoft Teams, Skype & Skype for Business users (and users of Google+, WebEx, etc.) with a webcam, a PC, Laptop, or Mac . . . but how can any of these users communicate back or use their room based screens, mics and camera systems?</i></p> <p>The Solution: <i>Upgrade your existing conference room and huddle room systems with our VSS-1 system or Kit and get more results, teamwork and collaboration.</i></p>
--	--

The VSS-1 System Benefits:

1. *You get efficient, unified communication and collaboration with PCs, Laptops, Macs, Androids and iPhones & iPads – using all the latest Microsoft Teams, Skype & Skype for Business capabilities - video, audio, SMS, IM, file sharing, recording, broadcasting . . . (or via Google+, WebEx, etc.)*
2. *Use your PTZ conference room cameras to move to a wide angle view, or to zoom in to focus on a particular speaker or object.*
3. *Use the conference room table-top mics to allow the remote sites to more clearly hear people around the conference room.*
4. *The remote sites will appear on the large screen, so your group in the conference room can easily see them.*
5. *Room speakers allow you to adjust the volume so the remote site can be heard clearly.*
6. *You can make either Point to Point & Group Video Conferencing calls (e.g. you can call up to 10 remote Skype video sites & 25 remote Skype audio conference sites).*
7. *Bring your PC/Laptop into the room (BYOD) during a call. Connect the VSS-1-KIT USB and HDMI cables. Immediately your Teams in local and remote sites are on the big room monitor, and you are using the powerful PTZ room camera, speakers and mics. There's no extra software to install. Plug and Play.*
